

Steffen Weber's

# Crystallography Picture Book

*Crystal Forms*

# *Preface*

---

This is volume three in the series of picture books that I am creating for educational purposes. All images in this volume were created using the program *JCrystal* ([www.jcrystal.com](http://www.jcrystal.com)). In the past I had written several MSDOS programs for the display of polyhedra and crystal shapes. Then I wrote a Java version called *JShape*, in order to visualize a crystal for which we needed to calculate absorption corrections. Then in 1999 I created *JCrystal*, in order to make such a program available to a wider circle of people with an interest in crystal shapes. Of course there are other free and commercial programs available such as *Faces* by Georges Favreau and *Shape* by Eric Dowty. However, *JCrystal* is the only one that also exports webpages and includes a Java applet called *JCrystalApplet*, which can display the created shapes interactively in a webpage. See for example the online mineral database at [www.webmineral.com](http://www.webmineral.com) by Dave Barthelmy, who used *JCrystal* to create more than 600 data files and who uses the *JCrystalApplet* extensively on his website. All data files used for this volume were created by Dave Barthelmy and Udo Behner (<http://www.kristallzuechtung.de/galerie.htm>).
